CASE STUDY:

THE QUAD LANDSCAPING PROJECT

PROJECT OVERVIEW.

This project
was
undertaken for
a **commercial
business park**
developer.

OUR SCOPE.

Our **hard landscaping** work on this project included excavation and installation of **drainage and service ducting**, as well as the formation of tree pits with in-built **irrigation systems**.

Soft landscaping on the project consisted of importing, spreading and preparing topsoil, supply and installation of turf and planting a variety of native and **ornamental shrubs** and **aquatic plants** within a drainage swale. We planted a variety of **large native trees**, with root anchors to prevent movement.

THE OUTCOME.

Upon successful completion of the project, we took **responsibility** of the site **maintenance** for **twelve months**, ensuring the planting survived and was competently and consistently managed.
